

We live in the country and xm is the only radio we can get clearly, most if not all the regular radio stations we get are filled with static. We enjoy xm in our cars as well as our homes. We depend on the weather and traffic info in our cars to help keep us safe as we are driving. Please do not take this valuable service away, We honestly did not know what good radio was until we had xm satellite radio. If those who oppose would do something about upgrading their service they would win back some listeners I am sure. Please reject NAB's petition 04-160 on behalf of myself my family and all the other families I know personally that listen to XM Radio. Thank you for your time
